Instructions for Teeth & Gum Disease Care Kit

Rotadent ProCare® requires a tooth-by-tooth brushing technique. The 360-degree rotation may cause the brush head to slip off of the teeth during use, particularly when first getting used to this technique. To help correct this, stabilize the handle with a firm grip. Next, follow the margins of the gumline to ensure proper cleaning of all surfaces, as described below:

- **Brushing Technique:** Hold your Rotadent ProCare® so the brush tip meets your gum line and the tooth surface at a 90-degree angle. To thoroughly clean each tooth, make "M" motions on the top teeth to massage the gumline and "W" motions on the bottom teeth.
- **Built-in Timer:** To make sure you brush evenly, divide your mouth into four sections (or quadrants). Brush each quadrant thoroughly for 30 seconds, as indicated by the QuadTimer.
- **Note:** Some individuals may experience a mild tingling sensation when first using the Rotadent ProCare®. This should stop after a few days of use.

[Reference: Rotadent ProCare® User Manual]

Pro-DenRx® Chlorhexidine

Generally recommended to use for two weeks.

- First brush and floss your teeth
- Measure out 1/2 fluid ounce (15 milliliters) as marked in the cap that comes with the bottle
- Swish the solution in your mouth for at least 30 seconds and then spit it out
- Do not swallow it. Do not mix it with water or other fluids. Do not eat or drink right after you use this medicine

15 milliliters
noted on inside
of bottle cap

Pro-DenRx® 1.1% Neutral Sodium Fluoride Gel

- Apply daily at bedtime, in place of your regular toothpaste or more often if your dentist recommends additional therapy based on the diagnosis
- Cover brush head with Pro-DenRx 1.1% Neutral Sodium Fluoride Gel and brush around all tooth surfaces and gum line for at least two minutes
- Spit out gel
- **Adults:** wait 30 minutes before rinsing mouth
- **Children under 12:** Rinse mouth thoroughly immediately after use
